

10. Source: Meeting with the local head of the District Administration

Report: Meeting with Local Administration Head in Beta Town Regarding HfA Situation, passed on by an informant to tribespeople.

The Health for All (HfA) delegation from Geneva recently held discussions with the head of the local administration in Beta Town. Interestingly, the local administrator is an alumnus of the University of Geneva's School for Humanitarian Services and is therefore well-acquainted with the intricacies of international humanitarian efforts.

The administrator acknowledges the mounting pressures on HfA to relocate its resources to more pressing regions like Gamma. He emphasizes that while war-affected countries like Gamma undoubtedly require humanitarian support, there is a dire need for the Beta national government to direct its own funds to its rural sectors.

In his assessment, the continuous presence of organizations like HfA has unintentionally enabled the national government to channel resources primarily to urban centers,

consequently neglecting healthcare necessities in rural regions like Beta Town. He expressed his support for HfA's proposed transition from the local hospital and conveyed his readiness to collaborate with suitable partners to facilitate this change smoothly.

The administrator is keen to liaise with tribal leaders to establish a government-led framework to enforce national health policies in the area. While he values the influential role of tribal leaders in halting past community conflicts, he asserts that such leaders should refrain from involving themselves in healthcare-related issues and labor disputes within the hospital setting.

In conclusion, the local head advises HfA to strategize the safe return of its staff to the hospital. He advocates for discussions between HfA and the national government to transition the delivery of health services to local organizations, ensuring that international NGOs aren't ensnared in domestic power struggle between the public sector and local stakeholders.
